EMPATHIA TECHNOLOGIES

How to use Atlas 4.218

The End-User Success Guide for Executive Boardroom, Atlas HQ: what is in the room, how to start, share and finish, and what to do when something does not work.

DRAFT Synthetic demonstration

Revision draft 1 · 13 November 2026

In this booklet

01 The room at a glance

02 How to use it, step by step

03 Meetings, sharing and hybrid work

04 When something does not work

05 Finding rooms, accessibility and privacy

Executive Boardroom, Atlas HQ, floor 4. It seats 14. The room joins meetings itself, and is operated from a touch panel.

You can see a display, a camera, 2 ceiling microphones, 2 loudspeakers and a touch panel. Behind them, 4 more kinds of equipment do the processing and the networking.

> **Before you start.** Nobody using this room is asked to open a cabinet, unplug the room's equipment or change a setting an engineer set. When a first step does not help, the next step is to ask.

After reading this, you can

- Start and end a meeting in this room without help
- Show your own screen
- Know what to do, and what not to do, when something is not working

01

The room at a glance

Give the executive team a hybrid room where remote leaders are seen and heard as clearly as the people at the table.

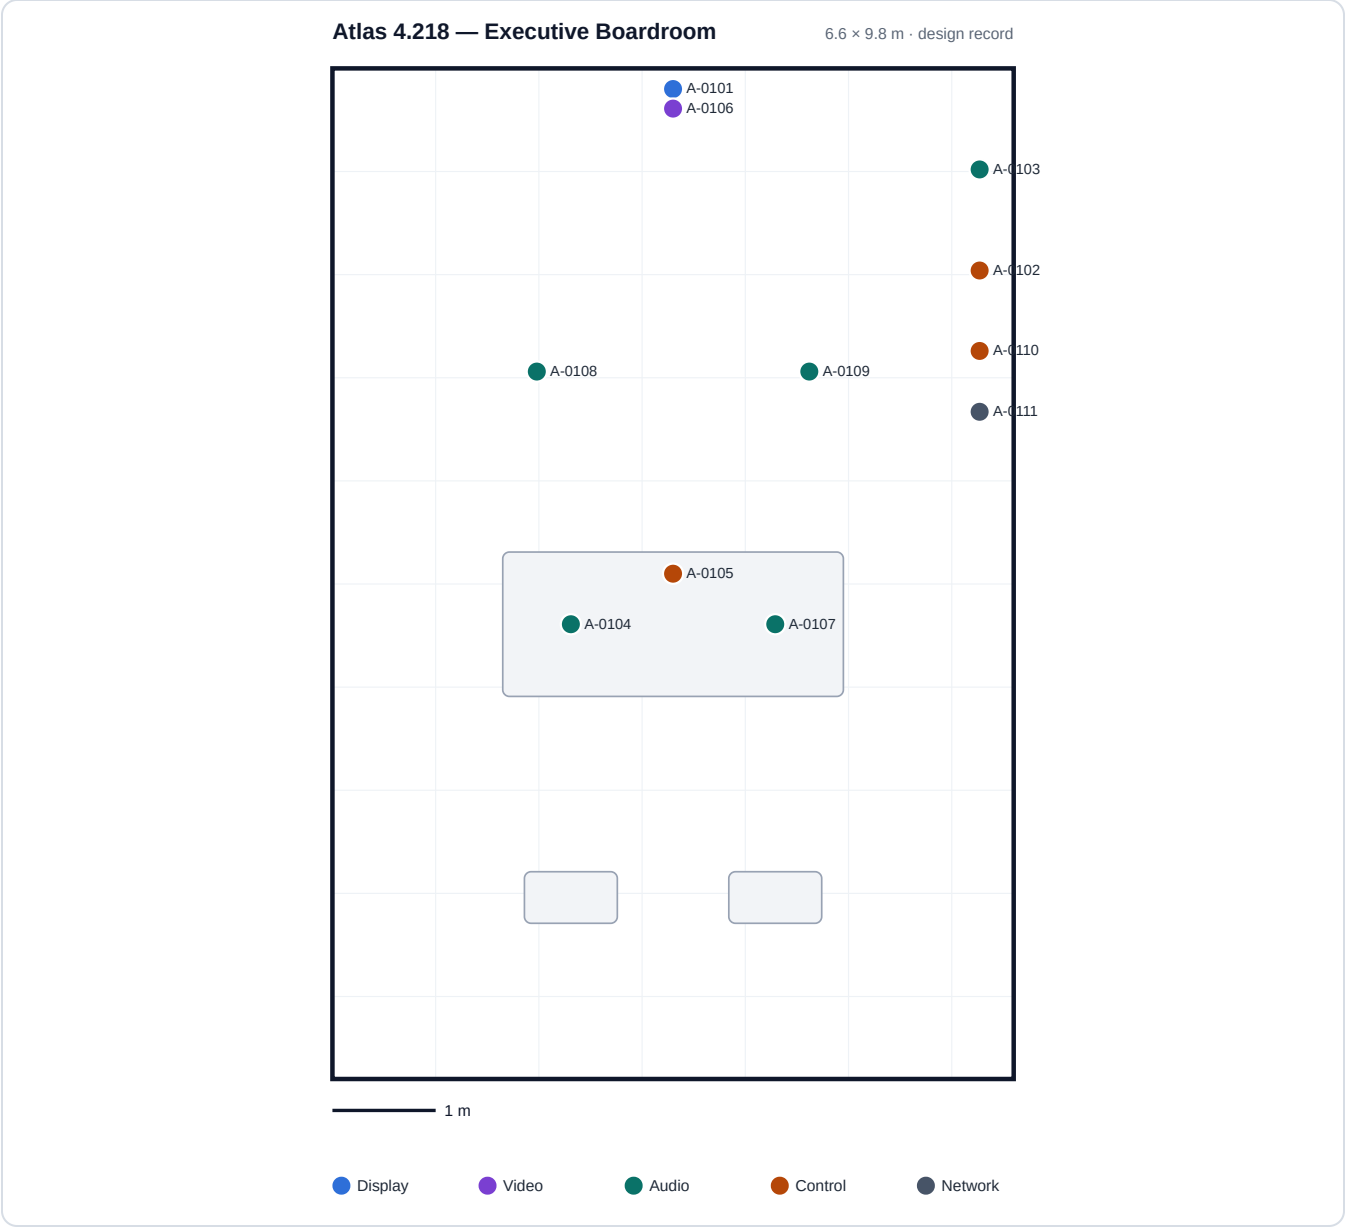

The room in Lite, the demonstration's 3D view, drawn from the same record as this booklet. Positions are as designed or modelled, not surveyed.

Room	Atlas 4.218 — Executive Boardroom
Seats	14

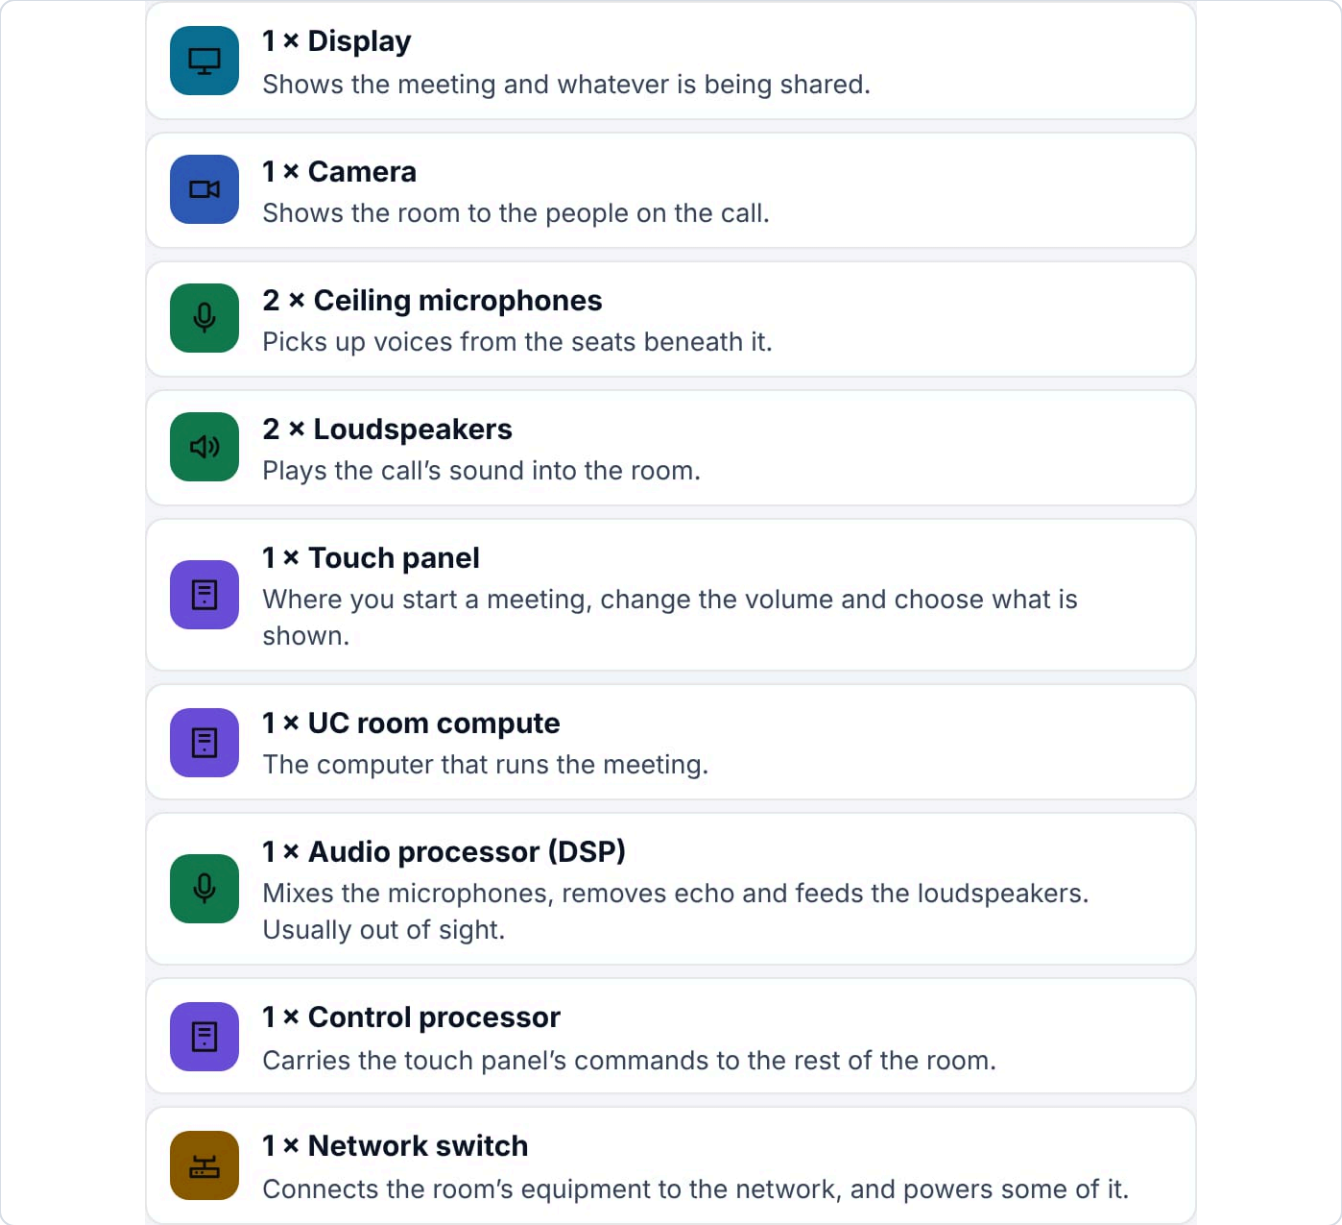

Size	6.6 × 9.8 m, ceiling 3 m
How it is operated	touch panel

What the room supports

A video meeting with people elsewhere	**Yes** — It has a room system, a camera and microphones.
Showing your laptop on the room's screen	**Yes** — By cable or without one.
Being heard at the back of the room	**Yes** — It has microphones and loudspeakers; whether your voice is lifted in the room depends on how it was set up.
Seating 14	**Yes** — Executive Boardroom.

The room drawn from its record: each dot is a device position by layer, with its code. A drawing, not a survey.

What is in the room, by kind, as the “In a room” page shows it.

02

How to use it, step by step

Every step below is written for this room's own equipment. A room without a camera has no camera section, and a step never names equipment the room does not have.

Start a meeting

The room joins the meeting itself. You do not need your laptop for sound or picture.

1. On the touch panel, look for your meeting. If the room was invited, it is listed with a Join button.
   Inviting the room when you book is what puts the meeting there.
2. Press Join. Wait for the far end to appear before you start speaking.
3. If your meeting is not listed, choose to join with a meeting number or code, and type the one in your invitation.
4. Check the screen: you should see the people elsewhere, and a small picture of this room.

Share your screen

Two ways: without a cable, or with the cable at the table.

1. Without a cable: on the touch panel, choose to share, and follow what it shows. It gives you a short code or a name to pick on your laptop.
2. With the cable: plug the cable at the table into your laptop.
   If your laptop has no matching socket, ask the site champion where the adapters are kept.
3. Wait a few seconds for the screen to change. A blank screen for a moment is normal.
4. In a meeting, people elsewhere see your screen only after you choose to share it into the meeting as well.
5. When you finish, unplug the cable from your laptop (not from the table) or stop sharing.

Be heard, and hear

The microphones are in the ceiling. Speak normally; there is nothing to pick up or switch on.

1. Speak towards the table, not the wall. Everyone at the table is covered.

2. To mute the room: on the touch panel, press the microphone button. A red or crossed microphone means people elsewhere cannot hear the room.
3. To change how loud the far end is: on the touch panel, use the volume control.

Be seen

The room has one camera.

1. Look at the small picture of the room on the screen: that is what people elsewhere see.
2. On the touch panel, choose a camera view: Room, Table.
   A view is a saved position. Choosing one moves the camera for you.
3. To stop being seen: on the touch panel, turn the camera off. Do not cover or turn the camera by hand.

What you can adjust

Everything you need is on the room's touch panel.

1. Meet: The meeting on every screen, cameras on the room, microphones on.
2. Present: The laptop on every screen, microphones on, a lower volume.
3. Leave everything else as you found it. Settings behind a lock or a password are the engineers'.

When you finish

Leave the room ready for the next person.

1. On the touch panel, press Leave or End. Check that the meeting has gone from the screen.
   A meeting left running keeps the microphones open.
2. Take your cable adapter with you and leave the room's cable on the table.
3. You do not need to switch anything off: the room turns itself off after a while.
4. Wipe the whiteboard, push the chairs in, and take your things.

If something is not working

You do not need to know what is wrong. Say what you see.

1. Open "In this room" for this room: it shows what to try, one step at a time, and writes down how it ended.
2. If it is still wrong, report it from there. It becomes a job with a number, with what you tried attached.
3. For something only someone local would know (where the adapters are, who has the key), ask the site champion.
4. Do not open cabinets, unplug the room's equipment or restart it at the wall.
   It can lose settings, and some of it is not safe to handle.

You can see a display, a camera, 2 ceiling microphones, 2 loudspeakers and a touch panel. Behind them, 4 more kinds of equipment do the processing and the networking.

The same guide on screen: the room-guide page in the demonstration.

03

Meetings, sharing and hybrid work

The parts that are the same in every room.

Meetings: scheduling, joining and booking a room

A meeting that starts on time is mostly decided when it is booked.

When you book.

- Book the room as well as the people. A room that is not on the invitation is not yours when you arrive.
- Choose the room for the number of people and for what you will do in it: a room with one small screen is a poor place for a workshop.
- If anyone joins from elsewhere, say so in the invitation, so the people in the room know to use its camera and microphones.
- Leave five minutes before the hour. The meeting before yours will run over.

When you arrive.

- Check the panel by the door or on the table: it shows whose meeting the room expects.
- Start the meeting from the room, not from your laptop, when the room can do it. Two devices in one meeting with their sound on will howl.
- If the room is taken and it should be yours, do not argue at the door: check the booking together.

When you finish.

- End the meeting on the room's panel, so the next people do not walk into your call.
- Take your cable adapter and leave the room's own cables where they were.

> **Your organisation adds:** How rooms are booked in your calendar, who may book which rooms, and how long a room is held for a meeting nobody arrives at. None is recorded in this demonstration.

Meeting rooms: what is in one, and what each part does

Five things, in most rooms. Knowing which is which tells you what to check.

The parts.

- The display shows the far end and whatever is being shared.
- The camera sends the room to the far end. If it follows people or frames the table by itself, leave it to do so.
- The microphones are often in the ceiling or on the table. They hear the whole room, including side conversations and crisp packets.
- The loudspeakers play the far end. If people in the room cannot hear, it is the room's volume, not your laptop's.
- The touch panel asks the room to do things. It is the remote control; it is not where the picture or the sound is made.

Rooms differ.

- A small room may have one bar under the screen that is the camera, the microphones and the loudspeakers in one.

- A large room may have several screens, several cameras and a lectern. Its own page says what it has.
- A room that joins the meeting by itself needs no laptop at all: you press Join on its panel.

Sharing your screen: by cable, without one, and from your own device

Three ways in most rooms. All three show everything on your screen.

Before you share.

- Close what you would not want on a wall: messages, email, another customer's document. Notifications appear over whatever you share.
- Share one window instead of the whole screen when you can.

By cable.

- Use the cable on the table. When it is connected the room usually switches to it within a few seconds; give it time before pressing things.
- If nothing appears, check both ends are pushed home and that your laptop is set to show on a second screen.
- If your laptop has no matching socket you need an adapter. The room's page says whether one is kept in the room.

Without a cable.

- Some rooms let you share over the network, from the meeting or from a code shown on the screen. The room's page says whether this one does.
- Wireless sharing is fine for slides and documents. For video with sound, a cable is steadier.

From your own device.

- Your own laptop can run the meeting while the room supplies the screen, camera and sound, in rooms that allow it.
- Mute your laptop's microphone and loudspeaker when you do this, or the room will echo.

> **Your organisation adds:** Whether personal devices may connect to room equipment, and to which network. None is recorded in this demonstration.

Hybrid meetings: making it work for the people who are not in the room

The room is built for the people in it. The people elsewhere need you to make up the difference.

In the room.

- One person at a time. Ceiling microphones cannot separate two voices.
- Face the camera when you speak to the far end, and say who you are if they cannot see you.
- Do not mute the room to talk among yourselves. The far end sees lips moving and knows.
- Ask the far end first, sometimes. They wait longest to get a word in.

Joining from elsewhere.

- Sound matters more than picture. A headset in a quiet place beats a good camera in a café.
- Mute when you are not speaking; unmute a moment before you start.
- Light your face from the front. A window behind you makes you a silhouette.

Running one.

- Say at the start how people should ask to speak, and keep to it.
- If you record, say so before you start and say where the recording will be kept. People may ask not to be recorded.

> **Your organisation adds:** Your organisation's rule on recording meetings, and who may see a recording. None is recorded in this demonstration.

04

When something does not work

Three safe things to try, then ask. Asking early is how rooms get fixed.

When something does not work

Three safe things to try, then ask. Asking early is the right call, not a failure.

Three things anyone can try.

- Look at the panel. It often says what the room is waiting for: an input, a meeting, a person to press Join.
- Check the room is not muted and the volume is not at nothing.
- Reseat the cable at your laptop's end, and try the other cable if the table has two.

Then stop.

- Do not open a cabinet, reach behind the screen, unplug the room's equipment or restart things you did not start. That turns a small fault into a visit.
- If a meeting is about to start, move to another room first and report this one afterwards.

Asking for help.

- Report it from the room. The label by the door opens this room's own page on your phone, so the report already knows where you are.
- Say what you see and hear: "the screen is black and the panel shows a red bar". That is more use than "it is broken".
- You get a number. You do not have to chase it; someone will tell you what happens next.
- Your site champion knows the rooms and the people who look after them. They are a colleague, not the service desk: start with the report.

> **Your organisation adds:** The hours support is staffed, and what to do outside them. None is recorded in this demonstration.

Common questions

The ones the people who look after rooms hear most.

In a room.

- "The far end cannot hear us." The room is muted, or you joined from a laptop whose microphone is the one in use. Check the panel, then the meeting's own microphone setting.
- "We can hear an echo." Two devices in the room are in the meeting with their sound on. Mute every laptop.
- "My screen will not show." Give it ten seconds, reseat the cable at your end, and check your laptop is set to use a second screen.
- "The camera is pointing at the wall." If the panel offers camera presets, choose the one for the table. If it does not, report it; do not turn the camera by hand.
- "The panel is frozen." Report it and use another room. Do not unplug it.

About the rooms.

- “Can I move the furniture?” The camera and the microphones were set for where the furniture is. If you move it, put it back.
- “Can I use the room without a booking?” If it is free, usually yes, until the person who booked it arrives.
- “Who do I tell that a room is always broken?” Report it each time. A room with five reports gets attention that a room with one complaint does not.

05

Finding rooms, accessibility and privacy

Atlas HQ, floor 4, on the campus map: room footprints are their modelled dimensions.

Finding a room and getting there

By name, by number, or by what you need it for.

Finding one.

- Search by the room's number or name, or by what it has: a room for twelve with a camera.
- A room's number usually holds its floor: 4.218 is on the fourth floor.
- If you are visiting, your host or the front desk will take you, or tell you the way.

Getting there.

- The way-finding page gives the route from the entrance, and says whether it is step-free.
- Allow time for lifts in a tall building at the top of the hour.

> **Your organisation adds:** Where visitors sign in, and whether they must be accompanied. None is recorded in this demonstration.

Accessibility

What rooms offer, and how to ask for what you need.

In a meeting.

- Most meeting applications offer live captions that each person can turn on for themselves; whether yours does is your organisation's setting. Where a room can show captions on its screen, its page says so.
- If you use a hearing aid, ask whether the room has a hearing loop. A room's page lists what it supports, and says when it does not.
- Share documents before the meeting, not only on the screen: a screen reader cannot read a wall.

In the room.

- A room's page says whether the way to it is step-free.
- Touch panels are usually at table height. If one is out of reach, say so in a report: it is a fault of the room, not of you.

Asking.

- You do not have to explain why you need an adjustment to ask for one.
- Ask before the meeting when you can. Some things take a day to arrange.

> **Your organisation adds:** Who to ask for an adjustment, and how far ahead. None is recorded in this demonstration.

Working from somewhere else

The same meeting, without the room doing the work for you.

Being heard and seen.

- Use a headset. Laptop microphones pick up the room you are in, and laptop loudspeakers feed back into them.
- Put the camera at eye level and sit an arm's length away.
- Close what is using the network if your sound breaks up: sound needs little, but it needs it steadily.

Working together.

- Work on one shared copy of a document, not on attachments. Two copies become two versions by lunchtime.
- Say in the chat what you have done, when the others are in another time zone. They will read it before you are awake.

> **Your organisation adds:** Where shared work is kept, and what may be done on a personal device. None is recorded in this demonstration.

Security and privacy basics

A meeting room is a public place with a very large screen.

On the screen.

- Everything on a shared screen is seen by everyone in the meeting and by anyone passing a glass wall.
- Stop sharing when you have finished the point. Do not leave your desktop on the wall while people talk.
- Sign out of the room's own computer if you signed in to it. Better, do not sign in to it: share from your own device.

In the room.

- Assume the room's microphones are on until the panel shows they are muted.
- Wipe the whiteboard, and take your papers.
- Do not plug in a memory stick you found, and do not let a stranger plug one in for you.

When something seems wrong.

- A message asking you to approve a sign-in you did not start is someone else trying to sign in as you. Refuse it and report it.
- If you think you clicked something you should not have, say so at once. Early is cheap.

> **Your organisation adds:** How to report a security concern, and to whom. None is recorded in this demonstration.

Teams, Outlook, SharePoint and OneDrive: which is for what

Four names people mix up. One line each.

Which is for what.

- Teams is where you meet, call and chat, and where a team keeps its conversations.
- Outlook is your email and your calendar. A meeting you are invited to appears there.
- SharePoint is where a team or a department keeps its shared documents and pages.
- OneDrive is where your own work files are kept, so they follow you from one device to another.

Working on a document together.

- Share a link to the document, not a copy of it. Everyone then edits the one document.

- When you share, check who the link works for: the people you named, or anyone who has it.
- A document for the team belongs in the team's place, not in yours. When you leave, yours leaves with you.

In Empathia.

- A contact action opens the application you chose with the person and the subject filled in. You still press send yourself; opening it has not sent anything.
- Where a button opens another application, it says so before you press it, and says which one.

> **Your organisation adds:** Step-by-step instructions for these applications are not written here: they change, and your organisation has its own approved guidance. This is where it would be linked. None is recorded in this demonstration.

Empathia Technologies

Every room, every device, every decision, with its evidence.

This booklet was set from the Living Campus demonstration on 13 November 2026. Every room, person and organisation in it is synthetic. It is a DRAFT: written by the demonstration’s engineer from the founder’s list of contents and not yet reviewed by a practising specialist. An organisation’s own edition replaces the generic wording with its approved instructions.

Names of other companies’ products are used only to say which is which; no instruction for another company’s application is written here.
